

REVIEW QUESTIONS

WEEK 9 – ADVANCED LAYOUT

1. How do you center inline content like text?
`P {text-align: center;}`
2. How do you center a block element like a div container?
Set width and then the margin: `width: 30%; margin: 0 auto;`
3. How do you center using flexbox?
`Display: flex; justify-content: center;`
4. What are the values of the property `justify-content`? What do those different values do? What are they used for?

`justify-content` controls alignment. Ex: `justify-content: flex-end;` (aligned right)

`justify-content: space-around;` (evenly spaces around text)

`justify-content: space-between;` (even spaced between text)

5. Why would we nest flexboxes? What does the HTML and CSS look like for nested flexboxes?

To control layout. Outer of the nested:

```
.outer {display: flex;
```

```
  justify-content: center;
```

```
  align-items: center;
```

```
  height: 300px;}
```

```
  .inner {display: flex;
```

```
    justify-content: center;
```

```
    align-items: center;}
```

WEEK 10 – RESPONSIVE DESIGN

6. What is the viewport?

The are of the window in which the web content can be seen.

7. What meta tag allows our websites to load full size on a cell phone?

`<meta name = "viewport" content = "width=device-width, initial-scale=1.0">`

8. What does the max-width property do?

The max-width property makes images flexible to fit the screen and not get too wide.

9. How can you make a flexbox container box wrap to the next line on a smaller screen?

`.containter {display: flex; flex-wrap : wrap;}`

10. What is the purpose of a media query?

Media queries allow us to give CSS rules strictly by width of screen. This allows us to change styles based on the width of a browser, the orientation, screen resolution, etc.

This is the `@media (max-width: 600px)`

11. What does display: block do for an inline element?

Display: none (goes away)

Display: block (shows it)

WEEK 11 – INTRO TO JAVASCRIPT

12. How are Java and JavaScript related?

They are NOT related.

13. What is JavaScript?

A programming language that allows you to put complex features on a web page.

14. What is the syntax for embedded versus external JavaScript?

Embedded : `<script> </script>`

External: `<script src="my.script.js"></script>`

15. Where can JavaScript go on youe HTML page?

It can go anywhere

16. What does an alert do in JavaScript?

Displays a pop up message to the user:

```
Alert("Hello!");
```

17. What are JavaScript events? What are the events we used in lecture and lab?

They are actions that happen on a webpage that Javascript can respond to. Ex: a page loading or a user clicking something.

Ex: onClick... onMouseover... etc

18. What is a JavaScript function? What is the syntax for a function?

A block of JavaScript code that can be executed when "called" for.

```
Ex: function SecondBlock( {  
Alert('Second Alert'); }
```

WEEK 12 – MORE JAVASCRIPT

19. What is the DOM?

Document Object Model

20. What is a node?

Each element on a page. Attributes inside tags are node (class, id) s as well as content inside elements (<p>). Basically everything in the HTML page is a node.

21. What CSS property and value do you need to show and hide an element?

Display: none; hides element

Display: block; shows element

22. What is a JavaScript locator? List the locators and what items of HTML or CSS we can change using locators.

A JavaScript locator finds and selects elements in HTML.

```
Ex: document.getElementById('id').innerHTML= "Text Changed!";
```

23. What is the list of nodes we changed in our examples?

24. What was the JavaScript code to change the above nodes?
