

LAB 11

WHAT WILL YOU HAND IN?

Create a word document, pdf or use the "write submission" option in Blackboard to provide the following:

1. Submit the URL for the shell game with alert boxes.
<https://aktran-su.github.io/ist263/lab11/lab11.html>
2. Submit the URL for the shell game with messages displaying in browser.
https://aktran-su.github.io/ist263/lab11/lab11_preview.html
3. Answers to the following questions:
 - a. Our shell game is very basic. What functionality do we need to add to make it more like a real game? List at least 3 improvements. I'm not looking for code here just your thoughts.
It might be a good idea to have the actual pea appear when the shell is clicked. The shell can move up or down to reveal it. I also think that the shuffling could be a bit better since it is the same animation appearing three times. Finally, the style of the win and lose text should be designed better in appearance to represent a proper win and loss.
 - b. In lecture and lab, we talked about the events: onclick, onblur and onload. Pick one of the other events in the list above and give me a scenario for how you could see it used on a web page.
If we were to use onmouseover we could use it to hover over an image that would then display additional information. I could see this used on a shopping page, where users can see more information without having to click to see more information about an item.
 - c. On this week's lecture slides, slide 7 lists example uses for JavaScript. What is another use for JavaScript? Some research will be needed.
Another use for JavaScript is real-time chat or messaging systems. JavaScript allows messages to appear instantly without refreshing the page, which creates a smooth user experience in customer support chats or messaging apps.

Submit answers to the following:

- d. What questions did you have about the lab? What didn't you fully understand?
None
- e. What was the hardest part of the lab?
I understood this lab very well.
- f. Rate your comfort level with this week's topics.
1 ==> I can do this on my own and explain how to do it.
