

IST 263 Project Milestone 4 – Wireframes

Name: Alyssa Tran

Description:

My idea for my website displays the types of piercing placements someone can get on their body. I have around 15 piercings total, which have varied in pain tolerance, and I want to create this site to help people understand their bodies as well as making sure they purchase the right type of jewelry. This site is meant to share my tips on healing the more untraditional piercings and provides information on what I wish someone would've shared with me on my journey.

Research:

Write down the urls of three websites you looked at to research layout for the type of site you are creating. For example, if I was creating an auction website, I might look at pages on <https://www.ebay.com/>.

url1	https://studs.com/
url2	https://www.livebytheswordtattoo.com/piercings
url3	https://www.xtremities.ca/post/15-types-of-body-piercings

Wireframes:

Use MockFlow or another diagraming software to create layouts for your pages. Consider the following:

1. Where is your navigation going to be located on every page.
2. Will you need a footer?
3. How can you make a layout that is visually interesting and helps communicate your site content?
4. Don't forget you must have at least 2 distinctly different page layouts.

Paste Your 3 Page Layouts Below

Piercing Information

Home Piercing Basics Piercing Information

There are so many different types of piercings you can get, with some being more anatomy dependent than others. It's important to check with your piercer if you have any questions about a piercing and if it is right for you.
